EDUCATION

University of Maryland

College Park, MD

Bachelor of Science in Computer Science, Minor in Mathematics; GPA: 3.93

May 2028

- **Relevant Coursework:** Object Oriented Programming, Data Structures & Algorithms, Linear Algebra, Multivariable Calculus
- **Certifications:** AWS Certified Cloud Practitioner (CLF-C02), Amazon Web Services, August 2026

TECHNICAL SKILLS

Languages and Developer Tools: Python, Java, JavaScript, SQL, Git, AWS, Docker

Libraries and Frameworks: React, Next.js, Node.js, FastAPI, Flask, LangChain, Selenium, Pandas, NumPy, PyTorch

EXPERIENCE

Software Engineer

Jan 2026 – May 2026

Project Lift

College Park, MD

- Built a RAG-powered chatbot using Google Gemini, LangChain, and Supabase to surface actionable insights from 288+ customer reviews, helping a food truck identify menu trends, complaints, and pricing gaps.
- Engineered a multi-source ingestion pipeline with Apify scrapers for Google Maps and Yelp, handling vector embedding generation, composite-key deduplication, and batched storage with per-document fallback.
- Delivered data-driven menu and pricing recommendations that generated an estimated \$4,200 in additional monthly revenue for the business within the first 8 weeks of chatbot deployment.

Software Engineer

Jan 2026 – May 2026

UMD Global Development Design Lab

College Park, MD

- Built a full-stack AI web app enabling NGOs, governments, and practitioners to generate and refine global development project proposals grounded in the Business Ethics Canvas framework.
- Implemented a RAG pipeline indexing expert feedback and 15+ GDD case studies on AWS, enabling the AI to produce context-aware proposals aligned with Sustainable Development Goals.
- Shipped an interactive chat interface for iterative proposal revision in a 6-person team, reducing average revision cycles by 50% through focus-group-tested UX spanning low-fi prototypes to Figma high-fidelity designs.

Software Engineering Intern

Dec 2025 – Feb 2026

Mondelēz International

East Hanover, NJ

- Built an LLM-powered platform that converts plain-English test requirements into automated Selenium browser tests using Claude API, React, and Flask, reducing manual testing time by 80%.
- Engineered a real-time test execution engine using WebSockets to stream live status, logs, and error traces across 150+ automated steps, cutting debugging time by 60% for QA engineers.
- Implemented autonomous session management with credential injection, state recovery, and environment switching, enabling unattended test execution across 4 enterprise staging environments.

ACHIEVEMENTS & PROJECTS

ThinkEx | *Next.js, React, Postgres, Vercel AI SDK*

Sep 2025 – Present

- Founding engineer at an open-source AI research workspace with 400+ monthly active users where users organize PDFs, videos, audio, and notes on a visual canvas and chat with AI scoped to their selected sources.
- Built a multimodal ingestion system that processes PDFs via OCR, transcribes audio with speaker identification, extracts YouTube transcripts, and scrapes web pages, letting users chat with any content type from one interface.

AI-Powered Model Validation Platform | *Python, FastAPI, Claude API, Railway*

Jan 2025 – Feb 2026

- Built an automated validation platform for Federal Reserve SR 11-7 model risk compliance, compressing a 6-week manual review into an 8-minute pipeline.
- Designed an LLM-driven evaluation engine scoring models against 28 regulatory criteria, auto-generating 80+ page audit-ready reports with drag-and-drop upload and real-time tracking.
