Education

University of Maryland College Park, MD

*Bachelor of Science in Computer Science, Minor in Mathematics; GPA: **3.92*** *May 2028*

- **Relevant Coursework:** Object Oriented Programming, Data Structures & Algorithms, Computer Systems, Advanced Linear Algebra, Multivariable Calculus, Probability & Statistics
- **Certifications:** AWS Certified Cloud Practitioner Aug. 2026

Technical Skills

Languages and Developer Tools: Python, Java, JavaScript, C, SQL, PostgreSQL, Git, AWS, Docker, Postman
Libraries and Frameworks: React, Next.js, Node.js, FastAPI, Flask, LangChain, Selenium, Pandas, NumPy

Experience

Mondelez International Jun. 2026 – Aug. 2026

Software Engineer Intern *East Hanover, NJ*

- Reduced manual testing time by **80%** by developing an LLM-powered platform that converts plain-English test requirements into automated **Selenium** browser tests using **Anthropic's API**, **React**, and **Flask**.
- Cut QA debugging time by **60%** across **150+** automated test steps by architecting a real-time execution engine that streams live status, logs, and error traces to engineers through **WebSockets**.
- Achieved **100%** routing accuracy in testing by designing an agentic system on **Amazon Quick Suite** that automatically assigns incoming supply-chain tickets to the owning project managers.

Project LIFT Jan. 2026 – May 2026

Software Engineer; Director of Client & Project Operations *College Park, MD*

- Surfaced menu trends, complaints, and pricing gaps from **280+** customer reviews for a local food truck by building a RAG-powered chatbot with **Gemini**, **LangChain**, and **Supabase**.
- Ensured reliable data collection across Google Maps and Yelp by engineering an ingestion pipeline of scrapers with vector embedding generation, composite-key deduplication, and batched storage with per-document fallback.
- Generated an estimated **$4,200** in additional monthly revenue for a local food truck by delivering data-driven menu, complaint-resolution, and pricing recommendations from the chatbot's insights.

UMD Global Development Design Lab Sep. 2025 – May 2026

Software Engineer *College Park, MD*

- Empowered NGOs, governments, and practitioners to generate and refine global development project proposals grounded in the Business Ethics Canvas by launching a full-stack AI web app.
- Aligned AI-generated proposals with Sustainable Development Goals by implementing a RAG pipeline on **AWS** that indexes expert feedback and **15+** GDD case studies for context-aware output.
- Streamlined revision cycles by **50%** for a **6-person team** by shipping an interactive chat interface that lets users iteratively refine and edit AI-generated proposals through conversation.

Projects

ThinkEx | ***Next.js, React, PostgreSQL***

- Founding engineer at an open-source AI research workspace reach **400+ monthly active users**, **50 GitHub stars**, and **$10k** in funding by contributing features for organizing PDFs, videos, audio, and notes on a visual canvas and chatting with AI scoped to selected sources.
- Enabled chat across any content type from a single interface by constructing a multimodal ingestion system that processes PDFs via **OCR**, transcribes audio with speaker identification, extracts YouTube transcripts, and scrapes web pages.

AI-Powered Model Validation Platform | ***Python, FastAPI***

- Compressed a **6-week** manual SR 11-7 model risk review into an **8-minute** pipeline by automating Federal Reserve compliance validation end to end with a **Python** and **FastAPI** platform that runs regulatory criteria checks concurrently using parallel processing.
- Produced **80+** page audit-ready reports scoring models against **28 regulatory criteria** by integrating an LLM-driven evaluation engine with drag-and-drop upload and real-time progress tracking.
