EDUCATION

University of Maryland

College Park, MD

Bachelor of Science in Computer Science, Minor in Mathematics; GPA: 3.92

May 2028

- **Relevant Coursework:** Object Oriented Programming, Data Structures & Algorithms, Linear Algebra, Multivariable Calculus
- **Certifications:** AWS Certified Cloud Practitioner (CLF-C02), Amazon Web Services, August 2026

TECHNICAL SKILLS

Product & Cross-Functional: Client Discovery & Scoping, Requirements Gathering, Roadmap & Timeline Management, Stakeholder Management, Cross-Functional Team Leadership

Languages and Developer Tools: Python, Java, JavaScript, C, SQL, Git, AWS, Docker, Postman

Libraries and Frameworks: React, Next.js, Node.js, FastAPI, Flask, LangChain, Selenium, Pandas, NumPy, PyTorch

EXPERIENCE

Product Manager

Jan 2026 – Present

Project Lift

College Park, MD

- Source and scope client engagements for a student-run consultancy, running discovery conversations with small businesses to define project goals, deliverables, and timelines before handoff to engineering.
- Manage **8 cross-functional project teams**, translating client needs into scoped technical requirements and matching teams to engagements based on priorities and capacity.
- Own delivery across all concurrent client projects as the primary client point of contact, driving on-time completion and generating an estimated **\$50,000** in savings for small-business clients to date.

Software Engineer Intern

Jun 2026 – Aug 2026

Mondelez International

East Hanover, NJ

- Built an LLM-powered platform that converts plain-English test requirements into automated Selenium browser tests using Claude API, React, and Flask, reducing manual testing time by **80%**.
- Engineered a real-time test execution engine using WebSockets to stream live status, logs, and error traces across **150+** automated steps, cutting debugging time by **60%** for QA engineers.
- Designed an agentic system on Amazon Quick Suite that routes supply-chain tickets to owning PMs with **100% accuracy** during testing.

Software Engineer

Jan 2026 – May 2026

UMD Global Development Design Lab

College Park, MD

- Built a full-stack AI web app enabling NGOs, governments, and practitioners to generate and refine global development project proposals grounded in the Business Ethics Canvas framework.
- Implemented a RAG pipeline indexing expert feedback and **15+** GDD case studies on AWS, enabling the AI to produce context-aware proposals aligned with Sustainable Development Goals.
- Shipped an interactive chat interface for iterative proposal revision in a **6-person team**, reducing revision cycles by **50%** through focus-group-tested UX from low-fi prototypes to Figma high-fidelity designs.

ACHIEVEMENTS & PROJECTS

ThinkEx | Next.js, React, Postgres, Vercel AI SDK

Sep 2025 – Present

- Founding engineer at an open-source AI research workspace with **400+ monthly active users** where users organize PDFs, videos, audio, and notes on a visual canvas and chat with AI scoped to their selected sources.
- Built a multimodal ingestion system that processes PDFs via OCR, transcribes audio with speaker identification, extracts YouTube transcripts, and scrapes web pages, letting users chat with any content type from one interface.

AI-Powered Model Validation Platform | Python, FastAPI, Claude API, Railway

Jan 2025 – Feb 2026

- Built an automated validation platform for Federal Reserve SR 11-7 model risk compliance, compressing a **6-week** manual review into an **8-minute** pipeline.
- Designed an LLM-driven evaluation engine scoring models against **28 regulatory criteria**, auto-generating **80+ page** audit-ready reports with drag-and-drop upload and real-time tracking.
